

## How to replace Camera Skins.

1. Start remove from the edge.

2. Remove Slowly. Do NOT remove iron sheet under original coverings.

**3.** You can see it has remaining adhesive and original coverings.

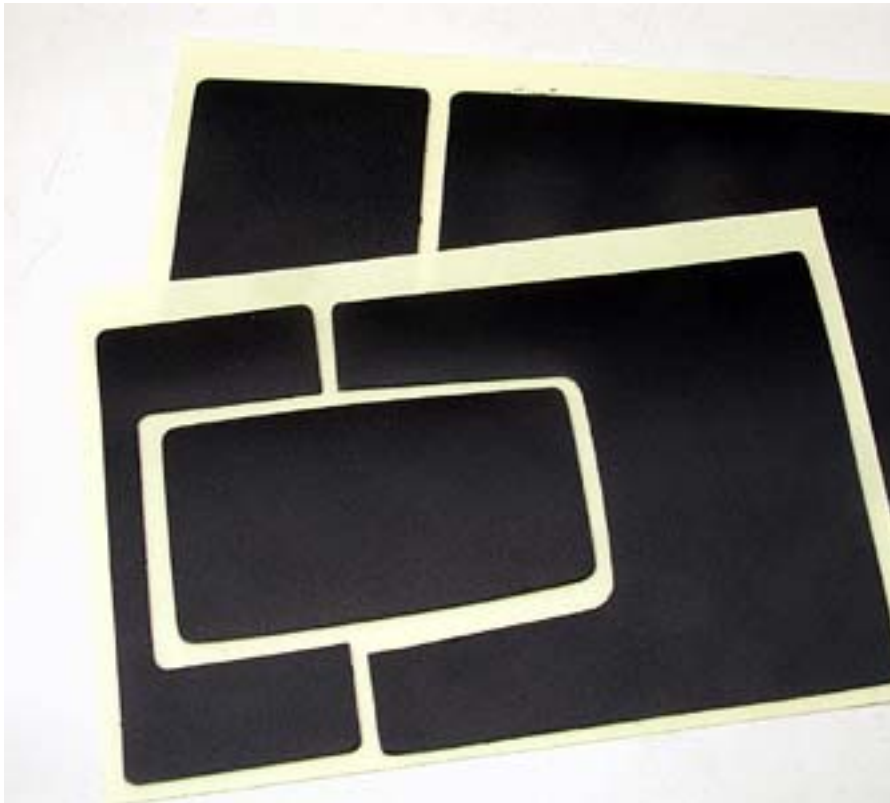

**4.** Use kitchen paper dipped with alcohol. Cover on removed part. Then wait 5 to 10 minutes until alcohol soaked into remaining adhesive.

**5.** Clean off old adhesive with a towel and alcohol solution.

**6.** Remove all old leathers in the same way. You can choose to keep the old leathers or toss them away.

7. Time to apply your new lovely skins.

8. Peel Skinslove from paper backing.

**9.** Align Skin properly and apply. Rub down in a linear manner to prevent bubbling. If bubbling or wrinkling occurs, you can “rewind” the process by peeling gently.

**10.** One step closer to a beautiful camera.

**11.** Apply subsequent pieces in the same manner.

**12.** With a little patience, your camera will look like this in no time.

**NOTE:**

When Skins are applied around bends or textured surfaces, improve adhesion by gentle heating using a hair dryer.
